# ELIMINATOR® Hermetic filter drier

## Types DCL and DML

All ELIMINATOR® driers have a solid core with binding material held to an absolute minimum.

There are two types of ELIMINATOR® cores. Type DML driers have a core composition of 100% Molecular Sieve, while type DCL contain 80% Molecular Sieve with 20% activated alumina.

ELIMINATOR® type DML driers are designed for applications requiring the highest moisture capacity.

ELIMINATOR® type DCL driers are designed for applications requiring high moisture capacity and acid adsorption capacity.

Available with flare and solder (pure copper) connections.

For other connections please contact your Danfoss Sales Representative.

**Features**

**The Core type DML**

- 100% 3Å Molecular Sieve core
- High drying capacity minimizing the risk of acid formation (hydrolysis)
- Recommended for use with HFO, HC, HFC and HCFC refrigerants
- Will not deplete oil additives

**The Core type DCL**

- 80% 3Å Molecular Sieve with 20% activated alumina
- Perfect core blend for systems that operate at high condensing temperatures and require high drying capacity
- Recommended for use with HFO, HC, HFC and HCFC refrigerants

**The Shell**

- PED approved for PS 46 bar
- Available with flare and solder (pure copper) connections
- Corrosion resistant powder-painted finish
- Special coating for marine applications available upon request
- Allows installation with any orientation provided the arrow is in the flow direction
- Available in sizes 1.5 – 75 cubic inches

**The Filter**

- 25 µm (0.001 in.) filter provides high retention with minimal pressure drop
- Thermally stable up to 120 °C

**Approvals**

UL file no. SA 6398  
PED 97/23/EC - a3p3

Compliant with ATEX hazard zone 2

**Note:** Only solder versions (cu-plated/pure copper) and connection sizes below 25mm are approved for flammable refrigerants now.

**Introduction**

ELIMINATOR® Hermetic filter driers protect refrigeration and air-conditioning systems from moisture, acids, and solid particles.

With these contaminants eliminated, systems are safer from harmful chemical reactions and from abrasive impurities.

Selection

Type selection is made considering the application

Refrigerant and oil types		DCL	DML
Refrigerant	HFO	Recommended	Recommended
	HC <sup>1)</sup>	Recommended	Recommended
	HFC	Recommended	Recommended
	HCFC	Recommended	Recommended
Oil	Mineral or AB	Recommended	Recommended
	POE or PAG, pure	Recommended	Recommended
	POE or PAG, with additives	Not recommended <sup>2)</sup>	Recommended

<sup>1)</sup> Only solder versions (cu-plated/pure copper) and connection sizes below 25mm are approved for flammable refrigerants now.

<sup>2)</sup> DCL Hermetic filter driers contain activated alumina, which is a polar material used for acid adsorption. Many oil additives are also polar substances and can be adsorbed by the activated alumina, rendering them useless, and reducing the drier's acid capacity, though this is not harmful to the system.

Example

Select the appropriate type (DML or DCL) based on refrigerant and oil type. Then select the drier size based on the adsorption and liquid capacity required.

a. Amount of charge: 25 kg R134a at  $t_L = 24\text{ °C}$   
To dry 25 kg R134a at  $24\text{ °C}$  from 1050 to 60 ppm moisture, a DML 16 is necessary.

b. Cooling capacity:  $Q_c = 20\text{ kW}$   
To obtain a mass flow corresponding to 20 kW cooling capacity with a DML 16 hermetic filter drier, a  $\frac{3}{8}$  inch connection must be chosen. Larger connections can be chosen in accordance with the liquid line dimension.

c. Result

DML 163 or DML 163s can be used.

If the initial moisture content is very small or a planned change of the filter drier is considered, a smaller filter drier size can be chosen.

The relatively large diameter of the hermetic filter drier means that the liquid flow velocity is suitably low and the pressure drop minimal.

Powder formation is eliminated because the solid core grains are bonded and cannot move against each other.
